Summary

Full Stack Engineer with production experience building MERN stack and Next.js applications end to end. Shipped multi-tenant platforms, role-based access systems, and real-time data pipelines from schema design through deployment on AWS EC2. Focused on clean REST API architecture, scalable backend design, and reliable full-stack delivery for SaaS and enterprise products.

Technical Skills

Languages & Frameworks: JavaScript, TypeScript, Next.js, React.js, Node.js, Express.js, Redux Toolkit

Databases & ORMs: PostgreSQL, MongoDB, Redis, Prisma, Mongoose

Cloud & DevOps: Docker, AWS EC2, CI/CD, Git, GitHub

Integrations & APIs: Stripe, REST APIs, WebSockets, Server-Sent Events (SSE), Vercel AI SDK

Experience

Full Stack Engineer, Techloset Solution, Onsite

11/2025 – 04/2026

- Designed and implemented REST APIs, relational database schemas, and Redux Toolkit state management for Next.js and MERN stack production applications, reducing data-fetching inconsistencies across client-facing modules.
- Containerized and deployed applications using Docker on AWS EC2; enforced structured code reviews that consistently caught regressions before production releases.
- Integrated third-party services including Stripe payment flows and WebSocket connections, delivering real-time features and secure payment processing across multiple client products.

MERN Stack Developer, MIT Programmer, Onsite

05/2025 – 09/2025

- Owned end-to-end development of a CRM platform including role-based access control across three user tiers (Admin, Manager, Agent), dynamic filterable data tables, and real-time analytics dashboards using Node.js, Express.js, and React.
- Identified and resolved performance bottlenecks in React component trees on data-heavy views, cutting unnecessary re-renders and improving dashboard responsiveness noticeably.
- Collaborated closely with the team on API design and MongoDB schema decisions, ensuring the data layer stayed consistent as the product scaled and new features were added.

Projects

UniSync: University Management Platform | *Next.js 16, TypeScript, PostgreSQL, Prisma, Redis, Stripe*

Live | GitHub

- Architected a multi-tenant university platform with a 5-role access hierarchy (Super Admin, Admin, VC, HOD, Student), managing registration, course enrollment, and fee processing across departments.
- Built a fee automation pipeline using Stripe, Redis pub/sub, and SSE streaming, delivering live payment feeds, digital receipts, and scheduled email reminders with zero manual intervention.

EngageFlow Sync: AI Sales CRM | *React 18, TypeScript, Supabase, PostgreSQL, Vercel AI SDK*

Live | GitHub

- Developed AI-assisted lead scoring with real-time streaming responses via Vercel AI SDK, enabling sales teams to prioritize high-value prospects without manual triage.
- Integrated Google Calendar for automated meeting creation and Resend for transactional email delivery, keeping client communications consistent and traceable end to end.

MedicareDashboard | *React, TypeScript, Node.js, Express.js, Prisma, MongoDB, Redux Toolkit*

Live | GitHub

- Built a full-stack medical dashboard covering appointment scheduling (FullCalendar), data analytics (Recharts), and JWT authentication with access/refresh token rotation and OTP email verification.

Education

GCU Faisalabad

BS Computer Science

2022 – 2026

CGPA: 3.65 / 4.0
